

DATASHEET

THE BENEFITS OF CENTRALIZED FAXING, PRINTING, SCANNING AND COPYING

Companies gain significant benefits by adding RightFax network faxing capabilities to their Sharp Digital Imager devices.

Cost control Consolidates resources and eliminates the need for multiple stand-alone fax machines, modems, phone lines and supplies by centralizing RightFax services at Sharp MFPs

Increased productivity and business efficiency Allows users to print, scan, copy and fax on one consolidated Sharp MFP right at the user interface (UI)

Enhanced security and compliance Offers tamper-resistant document delivery as well as certified or encrypted email delivery options

Optimized IT infrastructure investments Optimizes through integrations with Sharp MFPs as well as email, document management, workflow and other applications to make a more efficient, connected work environment

Simplified deployment and management Centralizes document development, duplication and delivery functions on an integrated networked solution using the RightFax MFP Module and Sharp MFPs

Captaris® RightFax® Integrations with Sharp MFPs

Reduce Costs and Improve Productivity by Integrating RightFax Network Fax Capabilities with Sharp Digital Imager MFPs

OVERVIEW

RightFax integrates with Sharp Digital Imager MFPs to help organizations improve efficiency by integrating faxing capabilities with an organization's Sharp MFP infrastructure. The combined solution allows companies to consolidate all faxing services on the network, giving users convenient access to faxing capabilities on the same devices used daily for printing, scanning and copying. With RightFax users gain both easy walk-up access and a central point of control for electronic or hard-copy faxing. As a result, organizations can streamline document flow processes and improve security while reducing the time and cost of administrative tasks.

Tested and integrated with Sharp Digital Imager devices make RightFax the ideal solution for organizations that want a cost-effective, consolidated solution to electronically capture, process, deliver and track fax documents.

RIGHTFAX FEATURES

RightFax provides robust, reliable and integrated fax server and electronic document delivery features including:

PRODUCT FEATURES	
Centralized management and administration tools	Provides intuitive configuration wizard and management tools to ease deployment and ongoing management
Intelligent outbound fax delivery from Sharp MFPs	Sends documents directly from Sharp MFPs or from desktop and other business applications; Delivery options include scheduling and priority sending
Flexible document delivery options at the Sharp Digital Imager UI	Delivers scanned documents via walk-up user, RightFax user, certified email and encrypted PDF; Certified email and encrypted PDF delivery require the RightFax Enterprise Suite.
Advanced sending features	Gives access user accounts, cover sheets and scheduled delivery options directly from the Sharp MFP
RightFax reporting, tracking and notifications available	Logs all data and actions for a faxed document and provides Sharp users customizable notification options for audit trail and accountability
Annotated with billing codes	Allows faxes to be annotated with billing codes for accounting purposes
First-page thumbnails on notifications to Sharp MFPs	Provides first-page thumbnail of outbound faxes for tracking and identification printed with the notification back to the device
Scalable platform	Allows organizations to easily expand MFP integrations, manage current MFPs allowing switching as needed, add MFP modules and more

OUTBOUND FAXING

Sharp MFPs using Open Systems Architecture (OSA) can capture paper documents and route them electronically via the network to the RightFax Server with the RightFax MFP Module, Sharp Connector. Users initiate the outgoing fax by using the touchscreen user interface and, then, scan the document. The document is converted into a TIF image and routed to the Captaris RightFax Server with the attached fax instructions. RightFax then converts the TIF to Comité Consultatif Internationale de Télégraphique et Téléphonique (CCITT) Group IV and transmits the document.

INBOUND FAXING

An incoming fax arrives at the RightFax Server. From the RightFax Server, the fax can be sent to a Sharp Digital Imager on the network and received in the normal queue as an incoming print job. From there it can be printed or routed electronically for distribution and retrieval.

HOW IT WORKS

RightFax MFP Module Information Flow

Note: Printing a received fax at the MFP does not require the RightFax MFP Module, only a RightFax Server. Printing a notification does require the RightFax MFP Module with your RightFax Server.

REQUIREMENTS FOR INTEGRATION	
RightFax MFP Module	One RightFax MFP Module with the Sharp Connector is required per RightFax Server, with a license required for each Sharp MFP device on the network.
Sharp Software	Sharp Open Systems Architecture (OSA) – please consult your Sharp representative for OSA version requirements
Supported Sharp MFPs	http://www.Captaris.com/partners/strategic_alliances/sharp/CaptarisProductIntegrationsforSharp.html
RightFax Server Options	RightFax Business or Enterprise Server 9.3 and above with latest service pack; both available from Captaris resellers For access to RightFax encrypted and certified delivery options, the RightFax Enterprise Suite is required.

ABOUT CAPTARIS, INC.

Captaris, Inc. is a leading provider of software products that automate business processes, manage documents electronically and provide efficient information delivery. The products of Captaris and its subsidiary Castelle, including Captaris RightFax, Captaris Workflow™, Captaris Alchemy® and the Castelle FaxPress line of products, are distributed through a global network of leading technology partners. We have customers in financial services, healthcare, government and many other industries, and our products are installed in all of the Fortune 100 and many Global 2000 companies.
