

Open Text Fax Server for Exchange Server 2010

Open Text Fax Server Makes it Easy to Create a Unified Fax and Email Solution with Exchange Server 2010

OVERVIEW

Effective Jan 15, 2010 Open Text is pleased to announce the availability of the **Open Text Fax Server for Exchange Server 2010 Bundle** through standard Open Text Fax and Document Distribution Group channels. This bundle is in support of the launch of the Open Text Fax Server v9.4 Feature Pack 1 (FP1) and the newly available Exchange 2010 support. Open Text is now a certified fax partner for Microsoft with Exchange 2010 Unified Messaging (UM). With Fax Server v9.4 and FP1 Open Text is able to ensure the fax capabilities users relied on in Microsoft Exchange Server 2007 UM are seamlessly integrated and available in Exchange Server 2010 UM.

The Open Text Fax Server Connector for Microsoft Exchange is an add-on to Fax Server, acting as a communication link between the Fax Server and the Microsoft Exchange Server. As a Microsoft Gold ISV Partner, Open Text fully supports faxing with Exchange Server 2010. Connector for Microsoft Exchange enables users of Exchange Server 2010 and prior versions to conveniently send, receive, and organize fax documents directly from Microsoft Outlook.

Overview of Fax Server integration in a Microsoft Exchange Server Environment

Fax Server and Active Directory databases can also be synchronized using Connector for Microsoft Exchange. This ensures that both Active Directory and Fax Server client information is consistently and correctly updated. With Connector for Microsoft Exchange, fully customizable Fax Server field mappings allow administrators to perform all user maintenance from Windows. Users created or modified in Active Directory are automatically updated in Fax Server. This not only simplifies user administration, but also ensures accuracy and consistency between servers, saving both time and resources.

Bundle Features:

- Create, send, receive, and manage faxes directly from Outlook
- Enable inbound and outbound fax functionality for Exchange 2010 Unified Messaging systems
- End users can organize, forward, and respond to faxes exactly the same as email messages
- Generate and send new faxes easily to one or more contact addresses in an Outlook Contacts folder; include both fax recipients and email recipients in the same enhanced form
- Administer Fax Server and Exchange systems from a single source with automatic Microsoft Active Directory database synchronization
- Simplify the creation and maintenance of user records using unified synchronization tools
- Generate custom, automated notifications of sent and received faxes in Outlook
- Track inbound and outbound faxes with Exchange Message Tracking
- Add optional encrypted and certified delivery capabilities
- Support multiple Fax Servers with a single Exchange Server
